About us

In today's fast-evolving cyber threat landscape, traditional Attack Surface Management (ASM) tools are no longer enough. **ThreatTrace360 (powered by CyberMindr)** redefines ASM by combining Red Team expertise, bug bounty intelligence, and continuous adversarial simulation.

Who is it for?

- Organizations seeking real threat validation, not just alerts
- Blue Teams and SOCs requiring contextual and actionable findings
- Risk managers focused on operational exposure, not just compliance
- Anyone overwhelmed by false positives and threat fatigue

Delivered as SaaS

ThreatTrace360 is a modern, lightweight, and cloud-delivered platform that continuously evolves with the threat landscape. It's built by elite cybersecurity professionals to support proactive defense.

Key Features:

Validated Vulnerabilities
Confirms actual exploitability, reducing false positives

Adversarial Simulation
Understand how attackers chain misconfigurations

Deep Threat Intelligence
Live monitoring of >300 underground forums

BEC & Brand Protection
Detects phishing sites, typosquats, impersonation domains

Active Secrets & Backup Scanning
Detects leaked .git, S3, and sensitive scripts

Real-World Risk Scoring
Prioritizes based on attacker interest and exploitability
